Summary

Computer Science undergraduate interested in software engineering with a user-centric approach. Experienced in visual design and creative leadership across student organizations, with hands-on experience building web, mobile, and game applications through academic and collaborative projects.

Education

University of Indonesia
BS in Computer Science

Aug 2023 – Expected 2027

- GPA: 3.28/4.00

Projects

SIKAYU

2026

- Worked within an Agile Scrum team to continue developing SIKAYU, an internal Fasilkom UI platform supporting graduation applications for **250+ graduating students** and academic monitoring for all active Fasilkom students
- Implemented enhancements to the graduation review module, including cum laude eligibility summaries, elective credit reporting, and standardized academic period formatting based on UAT feedback
- Improved the graduation export workflow, updated UI components to match the latest design system, and reduced code smells using SonarQube
- Tools Used: Django, Python, SonarQube, TDD

HiringGo

2025

- Developed the Job Vacancy Management module, implementing vacancy creation, listing, and student registration workflows as part of an Advanced Programming project
- Built controller and service layers following RESTful design principles, including standardized HTTP responses and request handling
- Applied the Builder pattern, practiced Test-Driven Development (Red-Green-Refactor), and wrote unit tests for controllers and services
- Tools Used: Java, Spring Boot, TDD
- [GitHub Repository](#) 

SIJARTA

2024

- Developed features for a multi-role home services marketplace as part of a Database Systems project
- Designed database schemas, populated relational datasets, and implemented SQL CRUD operations for bookings, vouchers, discounts, testimonials, and order status management
- Built backend functionality without using Django ORM, emphasizing relational database design and SQL development
- Tools Used: Django, Python, PostgreSQL
- [GitHub Repository](#) 

Picket

2024

- Collaborated on the development of a secure airline ticket booking platform as part of an Introduction to Software Security project
- Designed the application's interface using Figma to improve user flow, then implemented the backend functionality
- Conducted threat analysis and security testing using Burp Suite as part of a software security assessment
- Tools Used: Django, Python, Figma

EventYog

2024

- Collaborated on the development of a cross-platform event discovery application as part of a Platform-Based Development project
- Developed an administrative dashboard for managing user accounts
- Implemented CRUD functionality for account administration across the Flutter application
- Tools Used: Flutter, Dart, Django
- [GitHub Repository](#) 

Experience

Lead Artist, Game Development SIG

Feb 2026 – Present

RISTEK 2026

- Mentoring 8 junior members through internal classes on digital art and game asset creation
- Collaborate with programmers, designers, and artists to develop games for competitions

Expert Creative Staff

Oct 2024 – Jun 2025

BETIS 2025

- Designed 15+ visual content for social media and organizational communications
- Designed 5+ merchandise and internal organizational materials supporting programs and events

Expert Creative Staff

Jun 2024 – Apr 2025

FUKI 2024

- Created visual assets for social media and organizational activities
- Designed internal materials, including pitch decks and other organizational resources

Creative Staff

Jan 2024 – Nov 2024

BETIS 2024

- Produced 15+ visual content for social media and promotional campaigns

Expert Visual Design Staff

Dec 2023 – Jan 2025

COMPFEST 16

- Contributed to the development of design guidelines and visual standards for the organization
- Reviewed design deliverables and provided feedback to maintain visual consistency across team outputs
- Collaborated with cross-functional teams to ensure clear and consistent visual communication
- Designed merchandise, 15+ visual content for social media, and 25+ internal organizational assets

Skills

Programming Languages: Python, Java, Rust, Dart, JavaScript

Frameworks & Technologies: Django, Spring Boot, Flutter, PostgreSQL

Software Engineering: Git, REST APIs, Test-Driven Development (TDD), SonarQube

Design & Creative Tools: Figma, UI/UX Design, Digital Illustration
